FIRE PUMP

Fire pumps are an essential part of many water-based fire protection systems. They are used to increase the pressure (measured in psi and bar) of a water source when that source is not adequate for the system it's supplying

- **Highly quality pressure indicator.**
- **Equipped with local assembly control panel made of high quality electrical component**
- **Supplied either with or without suction line.**
- **High quality diesel engine: Diesel engines Flow Range (50 – 2500 GPM)
Diesel engines pressure range (5 -20 Bar)**
- **Equipped with suitable electrical motor**
- **Equipped with Heavy duty coupling**
- **Equipped with stainless steel jockey pump**
- **All the pump parts are equipped with Control fittin**
- **Equipped with pressure switches**
- **Equipped with flexible wires (RR type)**
